Our Approach: Acquiring the Right Talent with Speed and Precision

A. Understand the Position to Fill

- Gain a comprehensive understanding of the nuances of the position to be filled.
- Review the job description with the hiring managers or the recruiters, or conduct a job analysis by assessing incumbents.
- Create or refine a success profile for the position.

B. Assess Candidates

- Objectively measure an individual's competencies and fit for a particular job using the **Caliper Profile** assessment.

C. Interpret Results

- Provide analysis of candidates at a deep level to help make the best hiring decisions possible.

The Key Findings section depicts the range within which the individual's highest and lowest percentile ranks fall. Here is a legend that explains how to interpret that information.

Icon	Description
	80 or higher: This signifies very strong alignment between the individual's personality and factors that predict performance in the competency or behavior. Engaging in this area is likely to come naturally. It should serve as a significant strength, but it may also be beneficial to guard against overuse.
	60 to 79: This signifies strong alignment between the individual's personality and factors that predict performance in the competency or behavior. This area could serve as a strength, as this person seems to show inherent potential.
	40 to 59: This signifies moderate alignment between the individual's personality and factors that predict performance in the competency or behavior. Some aspects may come more naturally than others, which may result in inconsistency or selectivity in application.
	20 to 39: This signifies weak alignment between the individual's personality and factors that predict performance in the competency or behavior. This person may not be inclined to engage in this competency or behavior, and he or she may need to focus to be successful in it.
	19 or lower: This signifies very weak alignment between the individual's personality and factors that predict performance in the competency or behavior. This person does not appear motivated in this area. Performing successfully could require significant focus and effort on this individual's part to compensate for their apparent disinclination.
